

MOADEfy access matrix (Tool · Team · Task)

Slug: moadefy | Category: other

Summary

MOADEfy aligns Tool, Team, and Task. Job specs require Training ? Coaching (mentor roster) ? Self-managed contract before full tool access. Claim pool: half ideal = 100% commission, then same-profile broadcast 70/30, then AI fallback. Half project timeline funds tools, commissions, growth.

Guide

What is MOADEfy?

MOADEfy is the systemic alignment of three vertices so humans deliver work with the right tools, at the right competence, on the right schedule:

- Tool - BusinessSite platform, ethical AI, device, technology, eShop, support desk, PM, domain, payments
- Team - internal and external humans; permissions only after job-spec confirmation
- Task - schedule, rewards, penalties, compliance, costing - including the claim-pool half-time rules

Architecture: MOADEfy model process (X).

Job-spec path (permissions)

- Trained? OJT / WIL / classroom / AI-assisted - if not, training is scheduled
- Coached? Mentor assigned from the roster on a live task that implements the spec - if not, wait on the roster
- Contracted? Self-managed delivery with minimal / no supervision

Backend: People ? Access matrix / job specs · Competency · Training · Coaching · MOADEfy Tools.

Claim pool economics

StageRuleCommission

Solo 100%Complete by half ideal task time100% to claimer

BroadcastHalf ideal elapsedClaim lost; same-profile team notified

70 / 30Teammate finishes within half of remaining time70% completer · 30% original

AI fallbackTeam fails post-broadcast windowAI may complete; no human commission

Project target: complete work in half the project timeline so half the budget funds tool services, annual commissions, and growth.
